Proyectos B Architecture

tranquility, light, pureness...

our work, our life, our passion and also our architecture

arturo roldán

architect

A.R.T. Projects and Architecture was created in 2000 by Arturo Roldán Echeverri, 6 years after the beginning of his professional career. Conscious that experience is an enormous and invaluable asset, he first contracted as a partner his father, Arturo Roldán Cerezo, architect since 1964. Who is also the son of an architect, Arturo Roldán Polanco. We take great pride in the fact that the professional architecture has run through our family for three generations.

Today with more than 1000,000,000 sqm designed and built A.R.T. is a fully consolidated enterprise.

Beginnings

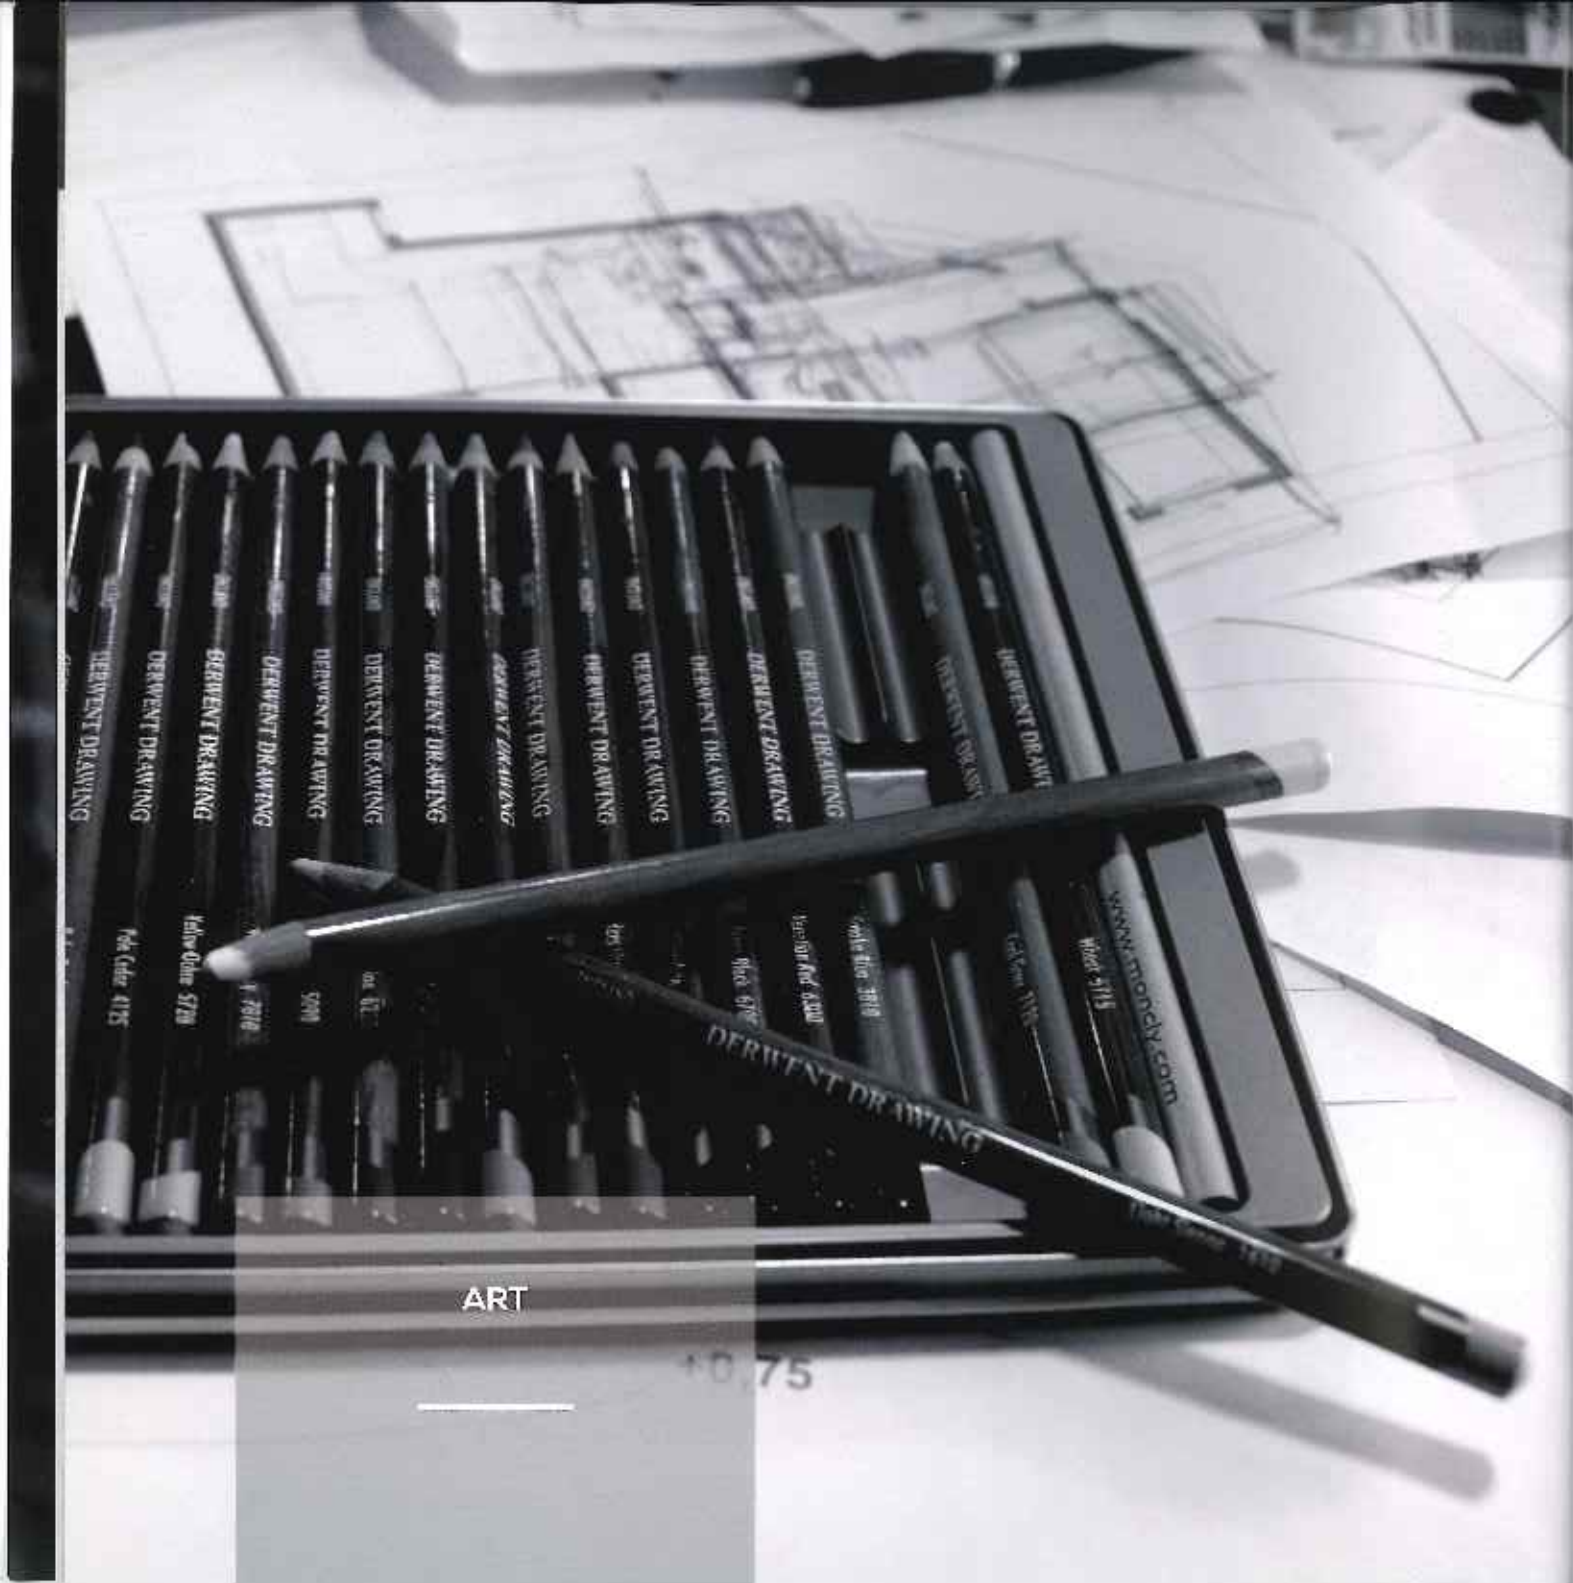

ART

ART

In ART, we've always considered ourselves sculptors of spaces, defining a very logical and functional space. The architect is responsible for the entire design and construction of the building. In this manner, a global vision of the building is in our mind from the very beginning of the design. We close our eyes and imagine how life would be inside it, walking, cooking, socializing and living. We see design and we see art, but we also visualize its structure, installation, furniture, fittings and how the sculpture we're chiseling and creating will better work.

We love to create beautiful and complete sculptures, but we never forget that they are tools for a way of living. A house or building should solve our lives!

philosophy

ART

Building design is our specialty. It is what we do best, and we live with the illusion of taking the opportunity of developing our work.

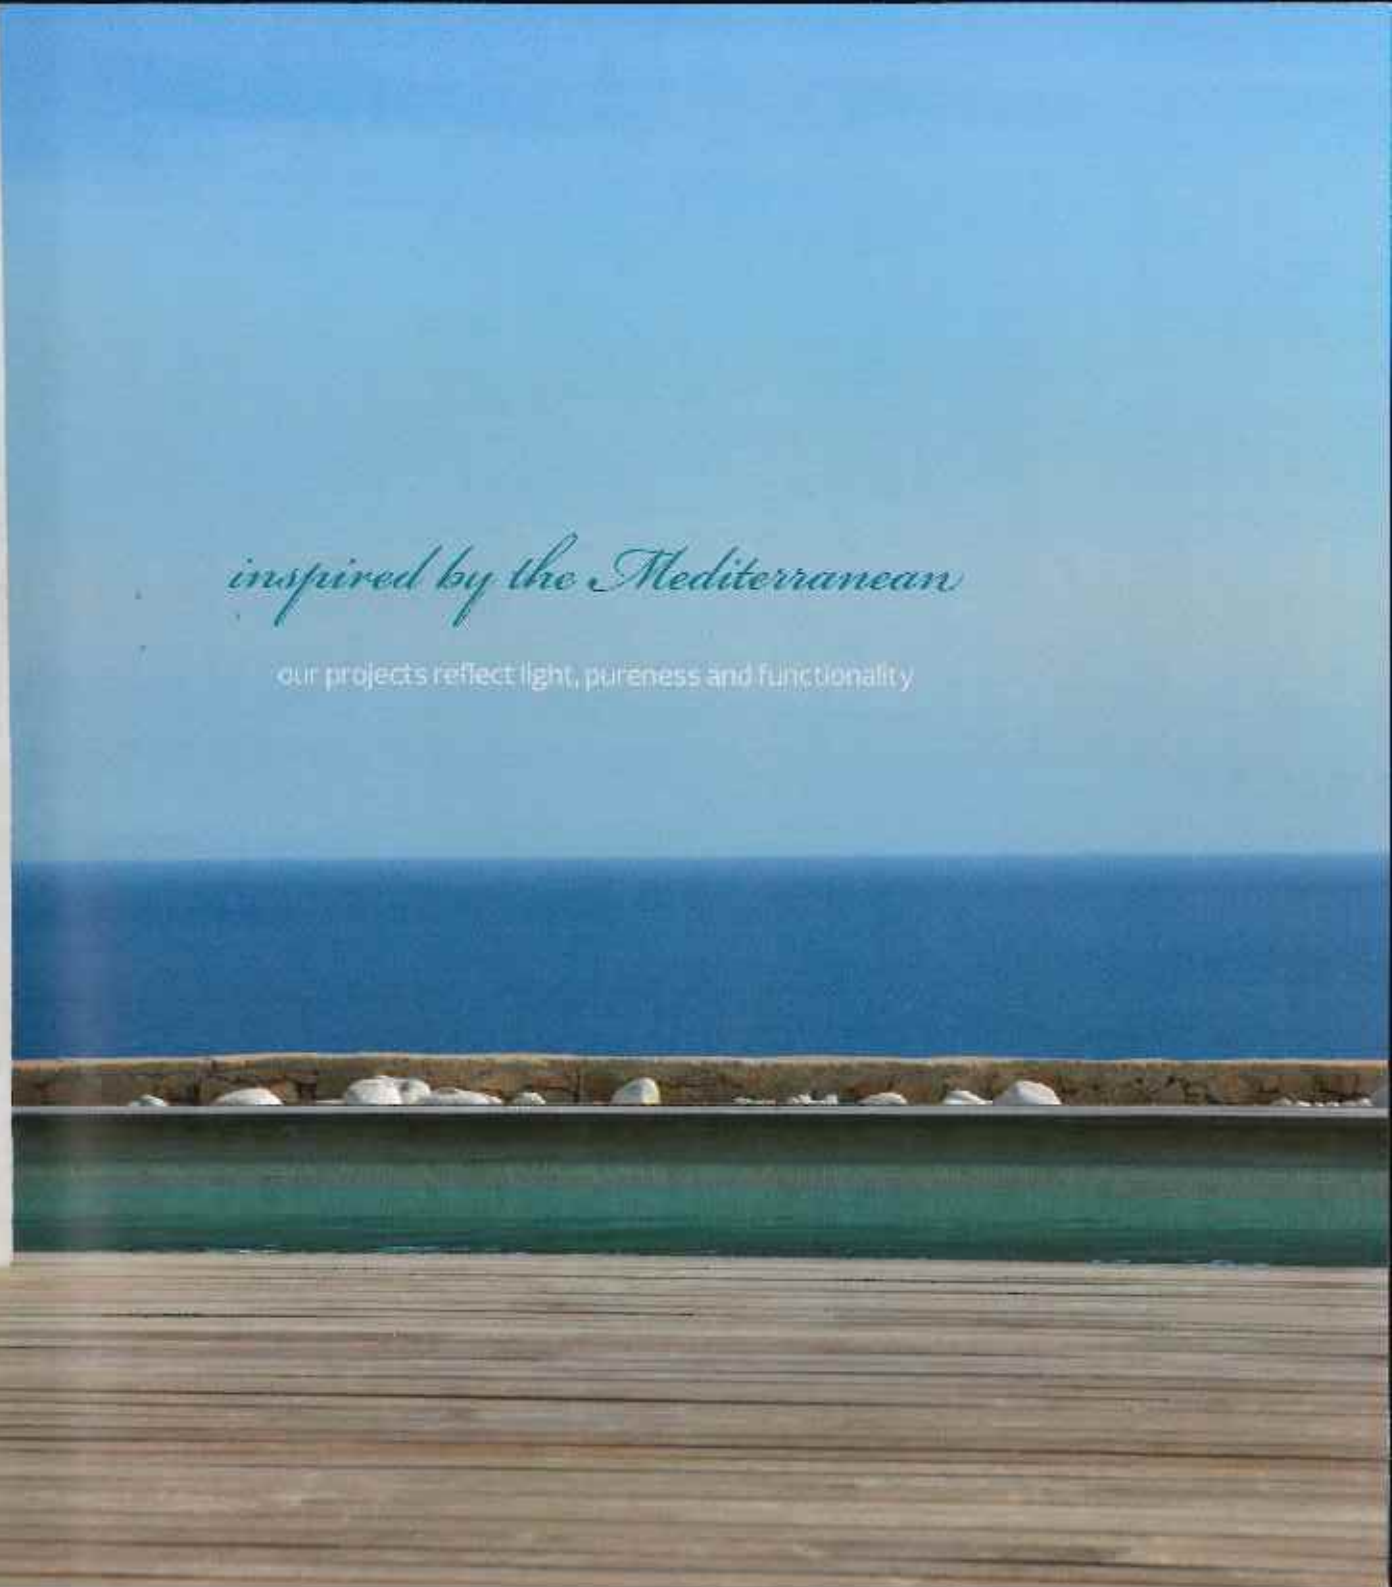

We are a team that works tirelessly for its years aiming for the excellence. We share the love and the passion for architecture with the commitment, the respect and knowledge in the development of projects.

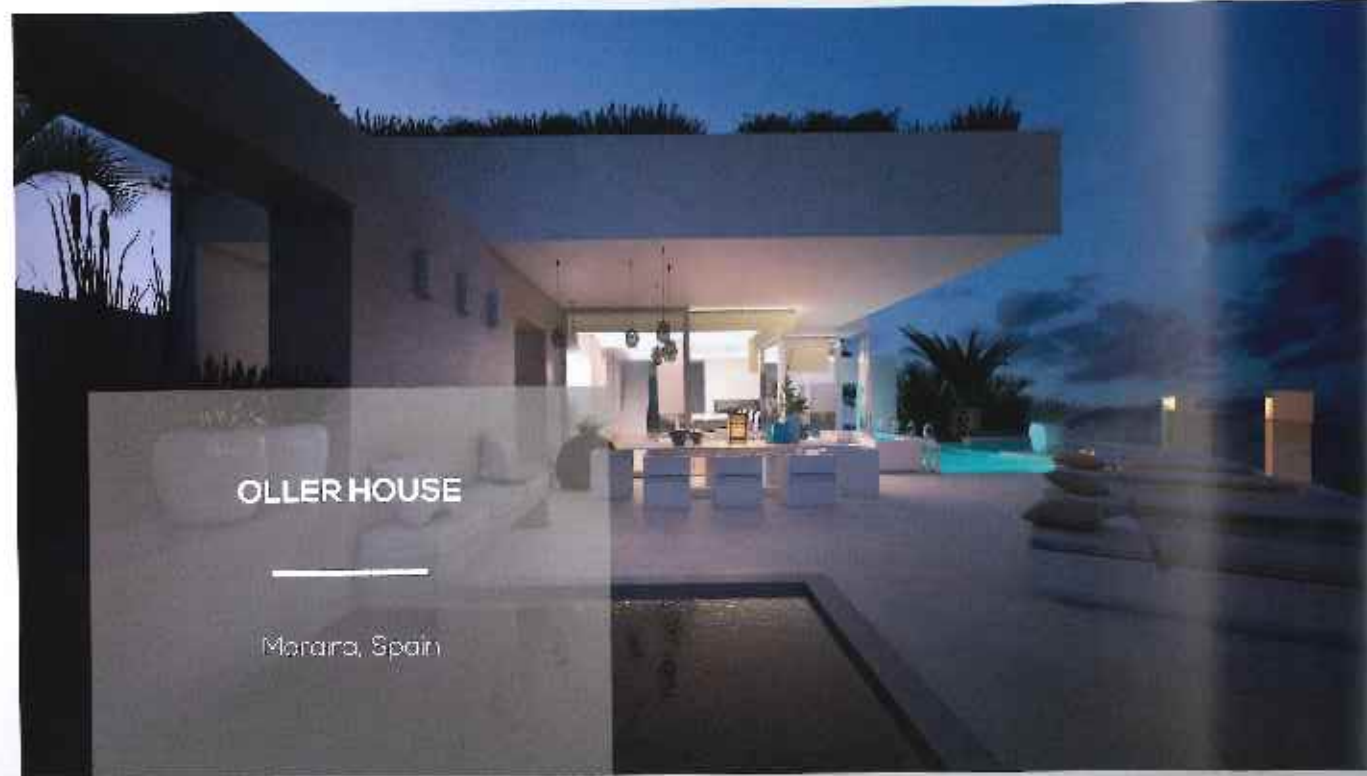

why art?

projects

inspired by the Mediterranean

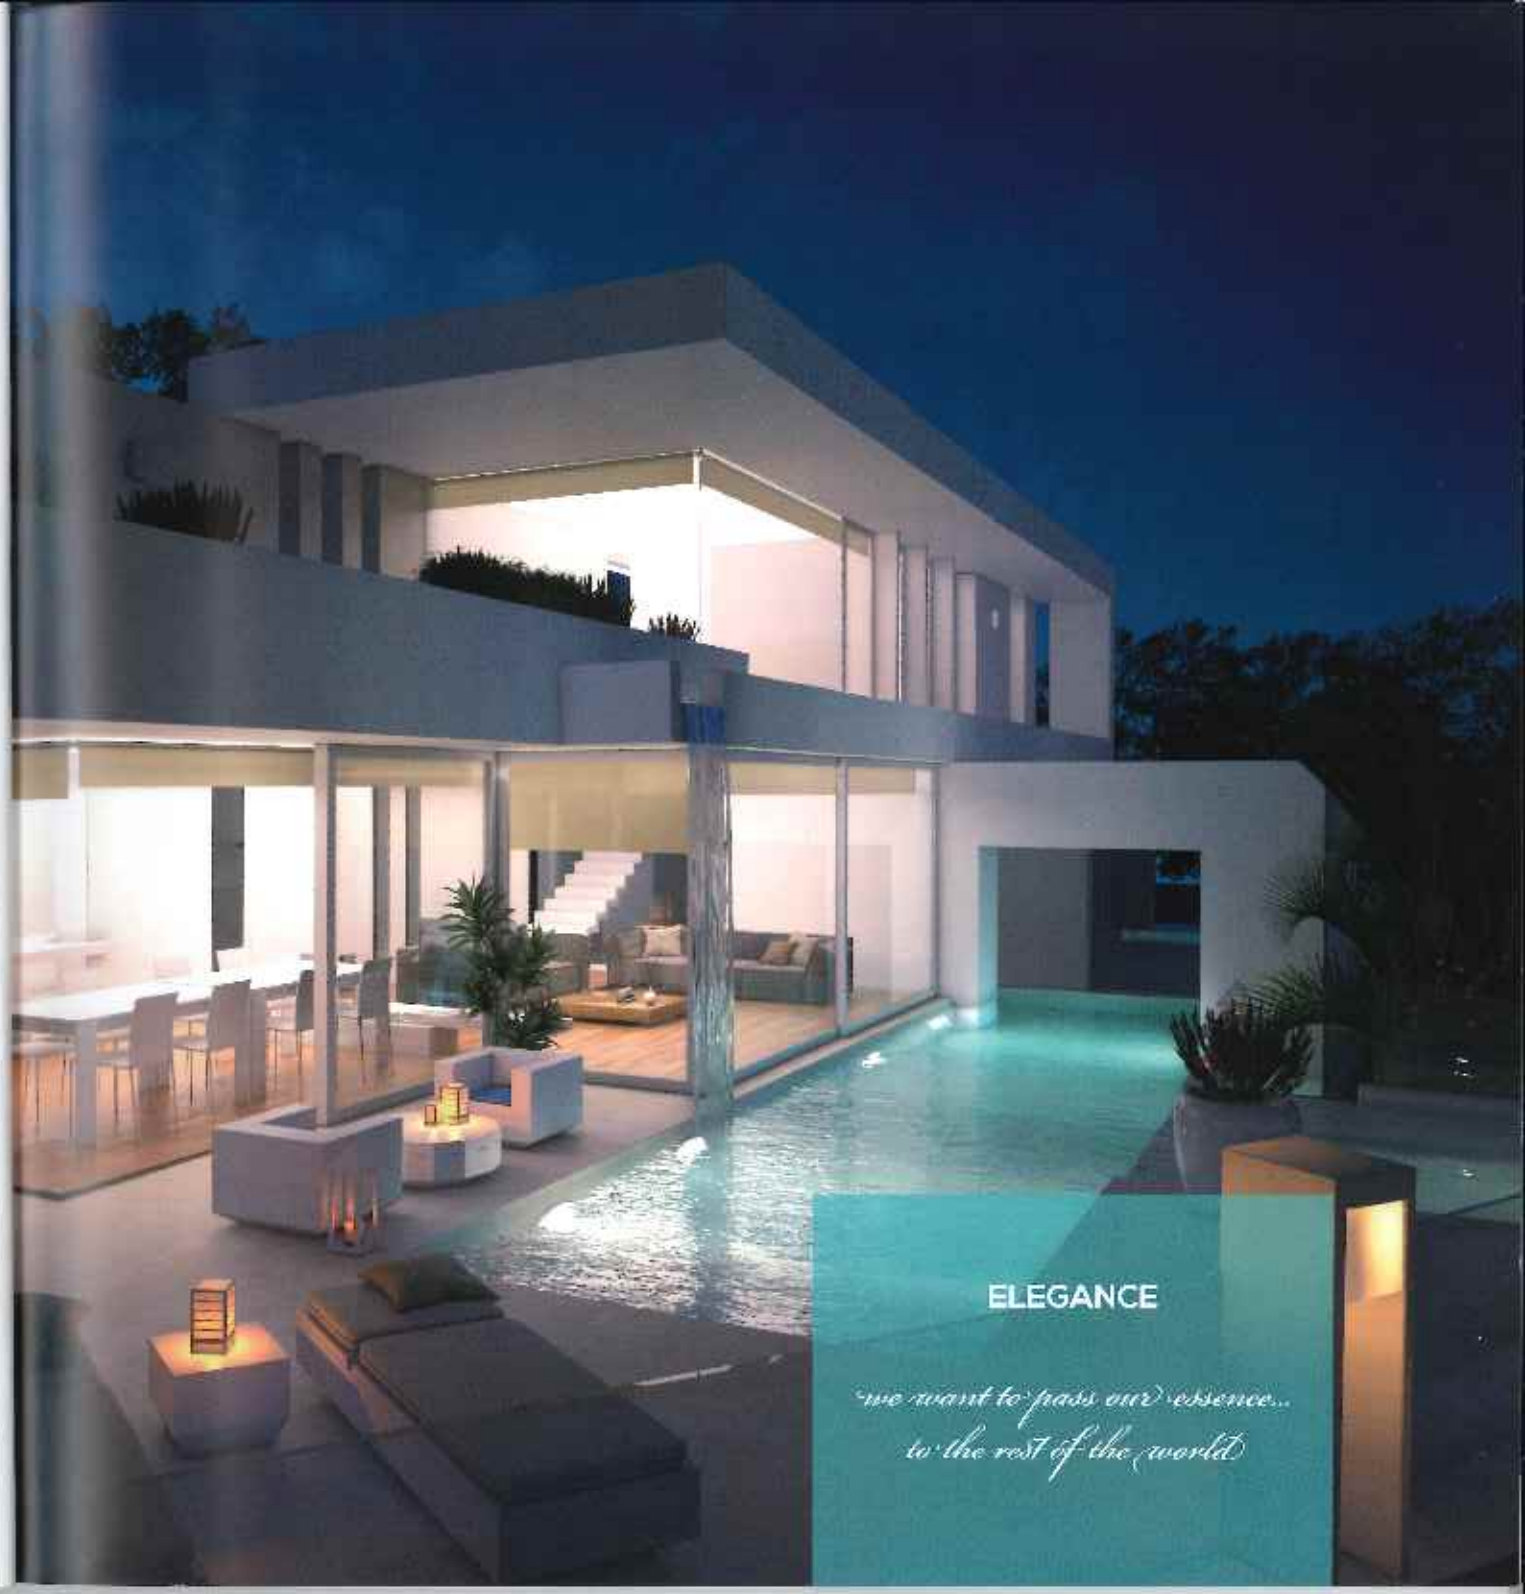

our projects reflect light, pureness and functionality
